

Participate in Language Research at the University of Washington

About the Study

This research addresses how children learn words in stories and the skills that support learning. This work is NIH funded.

Participants will be seen at the University of Washington in Seattle. Sessions are scheduled at your convenience.

About the Lab

The focus of the Neurodevelopmental Language and Learning (NeuDLL or “noodle”) Lab is on the development of language abilities in children with neurodevelopmental disorders. Activities in the lab involve measures of cognition and language. The goal of this research is to understand how children develop skills related to language and communication so that those skills may eventually be supported to help children achieve their best.

Compensation

As a token of gratitude, families are offered a small toy and gift card.
